An Arabidopsis full-length cDNA library was constructed essentially
An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al., 1998).cDNA cleaved with BamHI
and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et
al., submitted for publication) digested with BamHI and SalI. This
clone is in a modified pBluescript vector. Please visit our web
site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Unpublished (2002)

/clome_lib="N. thaliana, Columbia Col-0, site_2: Sall; cDNA
/note="Vector: pSPORT; Site_1: NotI; Site_2: Sall; cDNA
library was derived from unTreated rosette tissue from
Arabidopsis thaliana, Columbia Col-0, at 4 - 7 weeks.

Plants were grown in 1:1:1 peat moss/vermiculite/perlite
soil at 22 deg. C +/- 3 deg. C under constant light, and
watered with fertilizer. cDNA synthesis was initiated
using a NotI-oligo(dT) primer. Double-stranded cDNA was
blunted, ligated to Sall adaptors, digested with NotI,
size-selected, and cloned into the NotI and Sall sites of
the pSPORT vector."

Claim 8; Fig 1; 36pp; French.

The present sequence represents an Arabidopsis thaliana SGS3 polypeptide. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, pattericularly L-lysine. The present sequence is a protein described in the particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nakagawa

                                                                                                                                    밁
                                                                                                                                                                                                                                                                           CC AAF71138 to AAF71357 encode the Corynebacterium glutamicum homeostasis CC and adaptation (HA) proteins given in AAB79023 to AAB79242. The C. CC glutamicum HA genes (I) can be used in vectors for expression in host CC cells and production of fine chemicals, such as, an organic acid, CC proteinogenic or nonproteinogenic amino acid (preferred), purine or CC pyrimidine base, nucleoside, nucleotide, lipid, saturated or unsaturated CC fatty acid, diol, carbohydrate, aromatic compound, vitamin, cofactor, CC polyketide or enzyme. The amino acids produced can be lysine, glutamine, CC glutamate, alanine, aspartate, glycine, serine, threonine, methionine, CC cysteine, valine, leucine, isoleucine, arginine, proline, histidine, CC tyrosine, phenylalanine, or tryptophan. The fine chemical production can be modulated. The presence of (I) or HA proteins encoded by then are used for diagnosing the presence or activity of Corynabacterium diphtheriae. CC (I) can be used to map the C. glutamicum genome or can be used as markers CC for genetically engineered Corynabacterium or Brevibacterium. The HA CC glutamicum or help the microorganism to adapt to different environmental CC conditions
                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                      片
                                                                                                                                                                                                                                 5
                                                                                                                                                                                                                                                                                                                                                                            The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II). (I) and (II) are useful for the development of vaccines against P. falciparum (CC immunogens comprising the sequences of (I) are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they care rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum infection, or they can be used to identify drug resistance in P. falciparum infection of proteins can protein by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and CC provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence cof malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70287 and AAB181844 to AAB18352 crepresent nucleotide and protein sequences given in the present convention, but which are not specifically mentioned within the

The invention relates to an isolated nucleate action where expression countries in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are: of the mucleic acid inhibits proliferation of a cell. Also included are: consider a vector comprising a promoter operably linked to the mucleic acid (1) a vector comprising a promoter operably linked to the mucleic acid (2) a host cell containing the vector; (3) an isolated mucleic acid; (4) an antibody capable of specifically binding contingent whose expression is inhibited by the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular contingents and provide acid; (4) an antibody capable of specifically binding the polypeptide; (6) producing the polypeptide; (6) inhibiting cellular contingents and provide a compound that influences the activity of proliferation; (7) identifying a compound that influences the activity of required for proliferation, or that inhibits cellular proliferation; (8) required for proliferation, or that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism. The antibiotic; (10) profiling a compound that inhibits proliferation of the strains; or (13) identifying the target of a compound that inhibits the contingents acts of the strains is present in a culture or collection of contingents and contingents and contingents are useful for cellular proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational contingents of a cardiate molecules for rational contingents of the princed specification, but was obtained contingents of the princed specification, but was obtained contingents of the princed specification, but was obtained contingents of the princed specification, but was obtained contingents of the princed specification, but was obtained contingents and contingents and contingents and contingents and contingents and c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         24-APR-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WO2003033680-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo
                                                                                     The invention relates to a novel isolated polypeptide which is a hums kinase and phosphatase (KPP). The KPP polypeptides, polynucleotides, agonists and antagonists are useful for diagnosing, treating or preventing cell proliferative disorders such as atherosclerosis, hepatitis and cancer, developmental disorders e.g. mental cirrhosis, hepatitis and cancer, developmental disorders such as a parkinson's disease, autoimmune and inflammatory disorders such as parkinson's disease, autoimmune and inflammatory disorders such as parkinson's disease, autoimmune and inflammatory disorders such as parkinson's disease, autoimmune and inflammatory disorders such as parkinson's disease, autoimmune and inflammatory disorders such as parkinson's disease and diabetes mellitus and finally, viral, bacterial, fungal, parasitic, protozoan or helminthic infections. Furthermore, to polynucleotides encoding KPP may be useful for creating transgenic animals to model human disease, as wall as during gene therapy procedures. The current sequence is that of the human KPP protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human kinases and phosphatases and polynucleotides, useful for diagnosing, treating or preventing autoimmune or inflammatory disorders (e.g. AIDS, allergy or anemia), multiple sclerosis, osteoarthritis, cancer or hepatitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful for diagnosing, treating and preventing cancer (e.g., leukaemia, lymphoma, melanoma), an immune discrete (e.g., acquired immunodeficiency syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's disease, rheumatoid arthritis), a growth and developmental disorder (e.g. bursitis, cirrhosis, hepatitis, psoriasis, Cushing's syndrome), a cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial infarction), and a lipid disorder (e.g., fatty liver, cholestasis, Gaucher's disease, Niemann-Pick's disease). PKIN is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN is useful for creating knockin humanised animals or transgenic animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting differences in the Chromosomal location due to translocation, inversion, etc., among normal, carrier or affected individuals, and as hybridisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

The polypeptide and the polynucleotide are used for treating various diseases, such as prostatic cancer, prostatic benign tumour, other tumours, folic acid metabolism fault, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases and inflammations. This sequence represents a human prostatic specific membrane antibody protein 11.88 Nerminal peptide, used in EDISA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; g protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease, autoimmune disease; Alzheimer's disease; atherosclerosis; infection; osteoarthritis; allergy; osteoporrosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple solerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation, epilepsy; asthma; tuberculosis; obesity; nausea; mental retardation, epilepsy; asthma; tuberculosis; obesity; nausea;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 15 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         04-MAR-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABP82841 standard; peptide; 18
The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity c
                                                                                                                                                                                     Claim 1; Fig

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc avidity for a particular GPCR. (I) can be used as GPCR modulators and in CC gene therapy. The antigenic peptides for GPCRs are useful in detecting an CC antibody against a particular GPCR, and in the production of specific CC antibodies. The peptides and antibodies are also useful for detecting the CC gresence or absence of corresponding GPCRs. The antigenic peptides for CC GPCRs and antibodies are useful for diagnosing and designing drugs for CC treating immune-related diseases, growth-related diseases, cell CC diseases, or autoimmune diseases, growth-related diseases, cell CC diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, CC atherosclerosis, bacterial, fungal, protozoan or viral infections, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host CC disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, correct consisty, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, CC hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or construction of the present invention which are used in the CC gPCR proteins given in ABP81675 to ABP82018, which are used in the cc exemplification of the present invention

HCITEDX proteins are useful for CC identifying compounds which modulate the cytoplasmic sequestration of the HCITEDX protein. They are useful in the control of hypoxia signalling and CC in the activation of genes involved in cholesterol uptake, cholesterol biosynthesis and in the control of inflammation. They are therapeutically CC useful in number of different indications, particularly reduction of CC cholesterol biosynthesis and inflammation, prevention of tumour CC angiogenesis and treatment of any other condition. HCITEDX proteins are useful in screening methods for identification of compounds which CC interfere with the function of HCITEDX and useful for modulating hypoxia CC signalling, tumour angiogenesis or cholesterol synthesis. HCITEDX CC modulators are useful for preventing tumour angiogenesis and treating CC ischaemic heart disease. Compounds which promote the translocation of CC cytoplasmic HCITEDX in breast cancer cells are useful as leads in the CC development of anti-breast cancer drugs and compounds which prevent the translocation of HCITEDX into the nucleus enhance angiogenesis. HCITEDX CC modulators are useful for treating Netherton's disease or atopic disease. CC sequence is the p300-CH1 interacting domain of p35srj/CITED2. This CC sequence is used to clone full length HCITEDX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The present sequence is conserved protein region of a Caenorhabditis elegans homologue of a key metabolic enzyme. A number of C. elegans genes have been identified as homologues of genes in the mammalian insulin signalling pathway. The C. elegans age-1 gene encodes a homologue of the mammalian PI 3-kinase whilst daf-2 encodes a homologue of the mammalian risulin receptor. The C. elegans AKT kinase and PKB kinase act downstream of daf-2 and age-1, just as their mammalian homologues act downstream of insulin signalling. The C. elegans PTEN lipid phosphatase homologue, DAF-18, has been found to act upstream of AKT in the pathway. This discovery has enabled mammalian PTEN action to be mapped to the insulin signalling pathway. Conserved DAF motifs can be used to design probes to identify mammalian DAF homologues and thus to identify individuals with a predisposition toward the development of glucose intolerance conditions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activiny, interest growth factor activity, immunomodulatory activity and activiny inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WO200244330-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Murine
                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the crystal structure of the oligomerisation domain of the rotavirus non-structural protein 4 (NSP4). Rotavirus is a major cause of gastroenteritis, and the structure can be used to construct peptides useful in vaccines to protect against infection. The present sequence is a fragment of a rotavirus NSP4 protein
